SCDD_A dc79	4.3.3.2	QM Function																																								
SCDD_A dc54	4.3.3.2.1	void Adc_Init(void)																																								
SCDD_A dc56	This function is the initialization function of Adc component. This function will intialize the configuration of ADC peripheral and the value of AdcResPt. This function has no input and no output.																																									
SCDD_A dc81	This function will call following function: Adc_cfg() Adc_Pt_Init()																																									
SCDD_A dc83	4.3.3.2.2	void Adc_cfg(void)																																								
SCDD_A dc84	This function is used for configuration of ADC peripheral. The function will configure the CLC, ARBCFG, GLOBCFG, CHCTR, ICLASS, ARBPR register, and also configure the ADC channel. This function has no input and no output.																																									
SCDD_A dc85	This function will call following function: Adc_cfg_ch_HwVer1() Adc_cfg_ch_HwVer0()																																									
SCDD_A dc57	4.3.3.2.3	void Adc_cfg_ch_HwVer1(void)																																								

ID	Software Component Detailed Design																																																																																		
SCDD_A dc58	This function is used for configuration of ADC channel, based on C0 HW version. The function will configure the QINR0, QCTRL0, QMR0, ASCTRL, ASMR, ASSEL register. This function has no input and no output.																																																																																		
SCDD_A dc59	4.3.3.2.4	void Adc_cfg_ch_HwVer0(void)																																																																																	
SCDD_A dc60	This function is used for configuration of ADC channel, based on B02 HW version. The function will configure the QINR0, QCTRL0, QMR0, ASCTRL, ASMR, ASSEL register. This function has no input and no output.																																																																																		
SCDD_A dc63	4.3.3.2.5	void Adc_Pt_Init(void)																																																																																	
SCDD_A dc64	This function is used for initializing the value of AdcResPt. Due to the interface difference, the value of AdcResPt will be determined by HW version. This function has no input and no output.																																																																																		
SCDD_A dc86	This function will call following function: Adc_Pt_Init_HwVer1() Adc_Pt_Init_HwVer0()																																																																																		
SCDD_A dc65	4.3.3.2.6	void Adc_Pt_Init_HwVer1(void)
